

Animal Testing

ANIMAL TESTING

Hundreds of thousands of animals are poisoned, blinded, and killed every year in outdated product tests for cosmetics, personal-care products, household cleaning products, and even fruit juices. Although more than 1,100 companies have banned all animal tests forever, some corporations still force substances into animals' stomachs and drip chemicals into rabbits' eyes. These tests are not required by law, and they often produce inaccurate or misleading results—even if a product has blinded an animal, it can still be marketed to you.

ALTERNATIVES TO ANIMAL TESTING

Fortunately, scientists have developed sophisticated product tests that are faster, cheaper, and far more accurate than blinding and poisoning tests, which were developed in the 1920s. Human cell cultures and tissue studies (in vitro tests) and artificial human "skin" and "eyes" mimic the body's natural properties, and a number of computer virtual organs serve as accurate models of human body parts.

WHAT YOU CAN DO

Please vow never to buy products from companies that use animals. It's easy—just check out our lists of companies that do and that don't test on animals. You can even show your commitment by signing our Pledge to Be Cruelty-Free!

Remember to support only compassionate charities when you write that end-of-the-year check! Some health charities ask for donations to help people with diseases and disabilities yet spend the money to bankroll horrific experiments on dogs, rabbits, rats, mice, primates, hamsters, pigs, ferrets, frogs, fish, guinea pigs, sheep, birds, and other animals. Instead of ravaging animals' bodies for cures for human diseases,

compassionate charities focus their research where the best hope of treatment lies: with humans. They understand that we can improve treatments through up-to-date, non-animal methods, and they fund only non-animal research, leading to real progress in the prevention and treatment of disease.

Order [PETA's Cruelty-Free Shopping Guide](#) and learn how to support cruelty-free companies, charities, and colleges. You will also receive a monthly e-newsletter, links to valuable online coupons, special offers from cruelty-free companies, free stickers, and our pocket guides for cruelty-free living. Please allow six to 10 weeks for delivery.

Brands That Do Not Test On Animals
